SUBMISSION OF A SUBSTITUTE SPECIFICATION HAVING PAGE NUMBERING  
PURSUANT TO 37 CFR 1.312

Sir:

This paper is filed concurrently with payment of the issue fee and publication fee due in this case.

Submitted herewith is a substitute specification, which is identical to the specification filed in the RO/US and given international application No. PCT/US04/43492. The above-identified US application is the national phase of that international application. No changes have been made from the application as originally filed with the RO/US. This copy of the specification is filed because Applicants have been advised that the PTO copy of the application does not show page numbering, and a page-numbered copy has been required.

REMARKS

Applicants' representatives received a telephone communication from Noble E. Jarrell on Oct. 20, 2011 in which Mr. Jarrell stated that the Printing Office had been unable to further process the application because the pages of the specification were not numbered. The remedy to this as stated by Mr. Jarrell was to submit a substitute specification with page numbering.

Applicants' representatives consulted the counterpart international file upon which the present national phase application is based and obtained a copy of the application as originally filed with the RO/US bearing page numbering. This copy of the page-numbered specification is submitted as a substitute specification, in compliance with the Patent Office formality requirement as related by Mr. Jarrell.
